So what does this proxy data suggest about English satirical prints circa 1770-1830?

Occurrences of men and women rise and fall, and eventually stall

Occurrences of gender words in the context of speech rise and fall out of step with these peaks and troughs

Growth in speech acts, especially speech acts from unnamed men and women

The variety of male first names rise and fall as recurring female first names grow in prominence.

This isn't (totally) unexpected. Which isn't a bad thing...

Thank you!
